

Expand your payment processing power
with the only PCI-Compliant solution
for Microsoft Dynamics NAV.

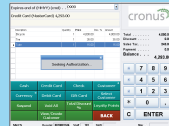

Process transactions right from Microsoft Dynamics NAV

Batch settlement

Extensive research functions

Process transactions directly from LS Retail

Easy...ChargeLogic is completely integrated with NAV

ChargeLogic eliminates the need for external hardware and software by bringing electronic payment processing inside Microsoft Dynamics NAV integrating directly with your order processing workflow, you get authorization approvals at the time an order is placed. The system automatically captures funds when an order is shipped and invoiced. For repeat customers, automatically authorizes the assigned default credit card when an order is released to the warehouse, with no user intervention needed. You can set up customers so that no extra steps are necessary to receive credit card orders. ChargeLogic automatically authorizes at the right time and settles at the right time. The result is faster, more accurate orders in less time. What could be easier!

Secure...ChargeLogic keeps customer data safe

ChargeLogic is PCI compliant, which means that ChargeLogic routinely undergoes lengthy audits regulated by the PCI Security Standards Council. ChargeLogic encrypts sensitive customer account information, while still allowing recently used credit cards to be on file for easy reference. In addition to the Address Verification Service and Card Verification Value results, ChargeLogic has a full Fraud Protection Suite to help identify risky transactions before an order is shipped. ChargeLogic offers advanced research functionality such as instant transaction retrieval by date and card number in order to protect merchants against possible chargebacks. You can be confident that your customers' data is safe and your business is protected.

Reliable....ChargeLogic processes every transaction, every time

ChargeLogic is completely integrated with NAV and directly connects with all the major payment processors in the U.S. and Canada, giving your customers a smooth, reliable transaction with every purchase. Our single-point connection cuts out middleware and eliminates the need to utilize third party software or gateways. Fewer connections mean fewer delays and a speedy average transaction time of two seconds or less! ChargeLogic's single-point connection increases the accuracy of transactions—just key information in once to eliminate duplicate data entry and reduce the risk for errors and discrepancies between what you actually charge customers and what your system says you charged. ChargeLogic's reliability reduces transaction time at the point-of-sale providing customers with a smooth purchasing experience every time.

Use ChargeLogic in the back office or at the Point-of-Sale with LS Retail

Maximize your investment in LS Retail with the power of ChargeLogic payment processing. Completely integrated with LS Retail, ChargeLogic enables the use of PIN pads, signature capture, check imaging, check verification, and check conversion. Use standard LS Retail tender types to accept electronic payments and integrate with statement calculation to show sales summarized by card type.

ChargeLogic's approach to easy, secure, and reliable electronic payment processing helps you stay focused on your business. Built on an en-cripted web services platform and completely integrated with Microsoft Dynamics NAV, users can easily enter data for authorization. Charges are automatically settled when sales orders are shipped or when a retail sale is completed. For LS Retail with NAV, use standard tender types to accept electronic payments. ChargeLogic comes fully functional for PIN pads, signature capture, check imaging, check verification, and check conversion.

Features and Benefits

Real-Time Authorization

Transactions verified and processed in real-time.

Scheduled & Recurring Transactions

Retains transactions for future or repeated authorization and settlement.

Reconciliation

Verify that information in Microsoft Dynamics NAV matches what is on file with the processor in order to keep in sync with real-world transactions.

Check Processing

Offers Check Verification or Electronic Check Acceptance.

Purchase Cards (Level II & Level III)

Accept Purchase Cards to enhance your relationship with your government and corporate customers while lowering processing fees.

Average Two Second Response Time

Your organization won't waste your employees' or your customers' time completing EFT transactions.

Batch Authorization Renewal

Automatically renews expired authorizations and updates the expiration dates.

Declined Transaction Reason

Provides denial reason and option to resubmit transaction.

Track Transaction Totals on Sales Documents

See the amount paid for a single shipment or for the entire order.

Eliminates Need to Data-Enter Payment Information

Customer payment history is stored in Microsoft Dynamics NAV and posted to the Customer Ledger.

Customize Receipt Printouts

Offer coupons on bottom of receipts to generate repeat customers.

PIN Pad Support and Signature Capture

The messaging to your customers is fully customizable and includes multi-lingual support. Signature capture enables paperless storage of receipts and the ability to reprint a signed receipt at any time.

MICR Reader Support and Check Imaging

Use a MICR reader to enter check data, eliminating the task of manually keying in information on the bottom of checks. Capture check images for Electronic Check Acceptance.

Language Support

Supports Canadian French, Canadian English and US English.

Receipt Designer

The Receipt Designer allows users to design custom receipts within NAV that can be printed at the POS. Designs can also include company logo.

Authorization Adjustment

Adjust the original authorization amounts to ensure you qualify for the best interchange rates. Especially useful when there are partial shipments or when freight charges are added after the initial transaction.

Available Granules

Basic EFT

Process credit card transactions from Sales documents and POS.

Advanced EFT

Use a hardware PIN pad or MICR reader for account information entry and signature capture.

Debit Card Processing

Process PIN-secured debit cards from Sales documents and POS.

EBT Card Processing

Process EBT cards, also known as Food Stamps, WIC, and Cash Benefits, from Sales documents and POS.

Gift Card Processing

Activate, deactivate and process stored value gift cards from Sales documents and POS or store balances in a local ledger.

Check Processing

Verify checks with Risk Management, process paper checks electronically, and accept checks by phone or internet from Sales documents and POS.

Purchase Card Processing

Process corporate or government Level III purchase cards, also known as P-Cards, from Sales documents.

Basic Encryption

Includes functionality to encrypt and decrypt data using a variety of algorithms.

Basic Compression

Compress images of signatures to save database space while retaining the necessary data to comply with return request.

Certified Gateways

ChargeLogic has undergone rigorous certification, including PCI PA-DSS, and is certified on the following platforms*:

FirstData Atlanta/Buypass

FirstData North/CardNet

FirstData Nashville/Envoy

TSYS/Vital/VisaNet

Paymentech Tampa/PNS
